
Contents

Preface to the third edition, vii

1 Introduction, 1

Part I The Global Journey: Material Sources, 7

2 The input of material to the ocean reservoir, 9

3 The transport of material to the oceans: the fluvial pathway, 11

4 The transport of material to the oceans: the atmospheric pathway, 52

5 The transport of material to the oceans: the hydrothermal pathway, 83

6 The transport of material to the oceans: relative flux magnitudes, 92

Part II The Global Journey: The Ocean Reservoir, 125

7 Descriptive oceanography: water-column parameters, 127

8 Air–sea gas exchange, 154

9 Nutrients, oxygen, organic carbon and the carbon cycle in seawater, 163

10 Particulate material in the oceans, 208

11 Trace elements in the oceans, 223

12 Down-column fluxes and the benthic boundary layer, 253

Part III The Global Journey: Material Sinks, 271

13 Marine sediments, 273

14 Sediment interstitial waters and diagenesis, 290

15 The components of marine sediments, 321

16 Unscrambling the sediment-forming chemical signals, 352

Part IV The Global Journey: Synthesis, 389

17 Marine geochemistry: an overview, 391

Index, 405

Colour plate pages fall between pp. 216 and 217
